

# WriteUp

## **Project objective:**

You have to deploy ELK Stack on a Docker container to implement continuous monitoring.

## **Background of the problem statement:**

Your manager has asked to create an elegant user interface for data analysis and data visualization as you have worked on ELK stack previously and have the idea of how it works. This will help the DevOps team to monitor and analyze the application behavior.

## **You must use the following:**

- Docker: To create a container for installing ELK Stack
- ELK Stack: To implement continuous monitoring
- Git: To connect and push files from the local system to GitHub
- GitHub: To store the Angular application

## **Following requirements should be met:**

- A few of the source code should be tracked on GitHub repositories. You need to document the tracked files that are ignored during the final push to the GitHub repository.
- Submission of your GitHub repository link is mandatory. In order to track your task, you need to share the link of the repository in the document.
- The step-by-step process involved in completing this task should be documented.

## **Steps:**

1. Created an EC2 instance.
2. Connected it via putty.
3. Installed Java and Elastic search on webserver.
4. Started the server.
5. Configured AWS Ip to access it using public ip followed by 9200.
6. Also installed some required plugins and kibana.
7. Successfully installed and run it.
